[1] Serving size is based off a 16 oz serving of finished product, and when the serving includes 1 second of white cap time, and when base product dispenses from the freezer at a rate of 2 oz per second, and when the Flavor Burst syrup dispense rate is set at a level 5. For optimal blend and taste use a base product containing 5% butterfat or less. Shake product typically needs a higher syrup dispense level for optimum flavor, whereas slush product usually requires a lower syrup dispense level.

[2] Servings per gallon do not reflect syrup lost when tubes and pumps are flushed during routine maintenance and cleaning procedures.
