

# Flavor Burst™

## *Installation of the CC8 System to Coldelite® Freezer Models*

The Coldelite® Adapter Kits are fully functional with the CC8 systems, however, the Blending Assembly must be installed perpendicular to the freezer door. Also, the assembly must have the version of the Blending Head with the syrup port in order to allow enough room for the Elbow Tube assembly. If your Blending Assembly does not have this, please contact your local Flavor Burst™ distributor for additional information or with questions in general.

- 1** Ensure the Blending Assembly includes the extended version of the Blending Head with syrup port.
- 2** Install the Blending Assembly perpendicular to the freezer door so that the Drive Motor is lined up with the draw handle.
- 3** Use two Elbow Tubes and the Tube Connector in the outside port of the Blending Hopper. Angle the assembly so that the Chip Transfer Tube is installed to the side of the freezer door.
