

Flavor Burst™

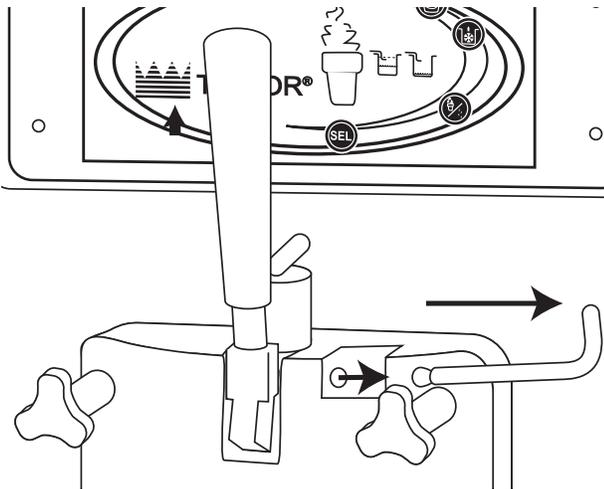

ELE 700C Crown Draw Handle Switch

Assembly and Installation

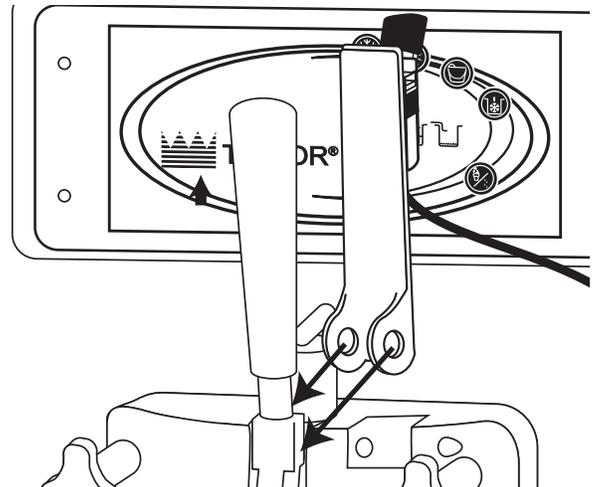

Taylor® Crown series freezers are manufactured with an internal switch assembly to accommodate Flavor Burst equipment. The ELE 700C Crown Draw Handle Switch Assembly is designed for use with these Crown series freezers in place of the standard internal switch (located beneath the cantilever on the left-hand side of the freezer door) to provide operators with an option to better manage flavor carryover.

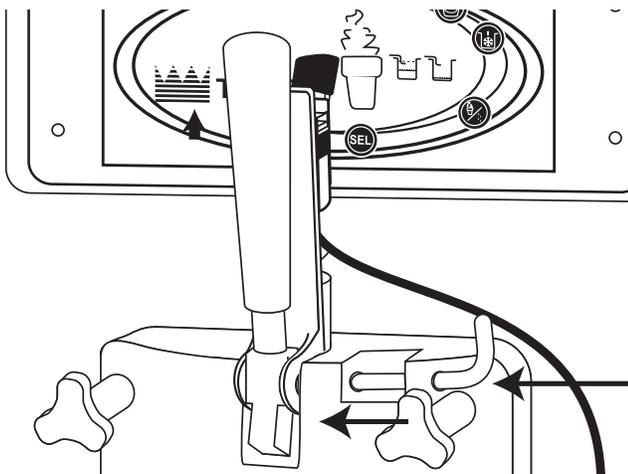

- 1 Remove the pivot pin from the draw handle.

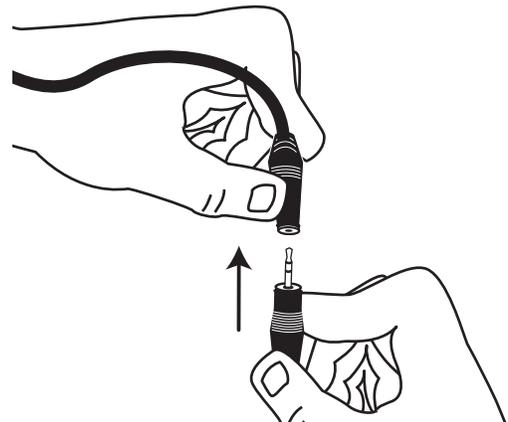

- 2 Mount the Draw Handle Switch over the draw handle so that the bracket holes line up with the pivot pin holes.

- 3 Replace the pivot pin to secure the assembly.

- 4 Connect the Switch to the keypad. Be sure to fully engage the jacks.

NOTE: DO NOT NEGLECT TO CHECK THIS CONNECTION DURING DAILY STARTUP.
