

Flavor Burst™

POP 430 Panel Setup and Installation

The POP 6067 and POP 7020 display panels are designed for use with Taylor model 430 shake freezers. If an optional internal switch assembly has been installed on the freezer for the Flavor Burst system, check the position of the stereo jack on the freezer facing before installing the display. It may be necessary to drill a hold through the display where the spigot switch cable from the Operator's Keypad connects to the stereo jack.

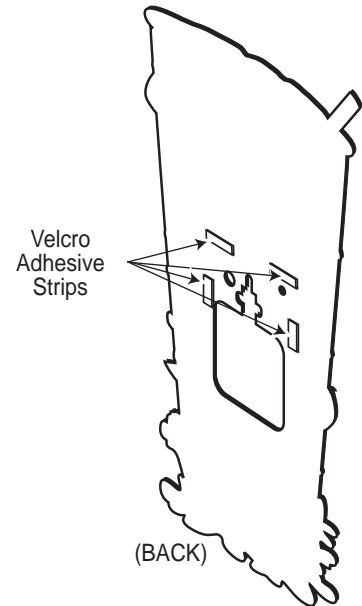

430 Large Display Panels:
POP 6067 Yellow Shake Panel
POP 7020 Nice Ice Panel (not shown)

Measures ~19.5" w x 37" h

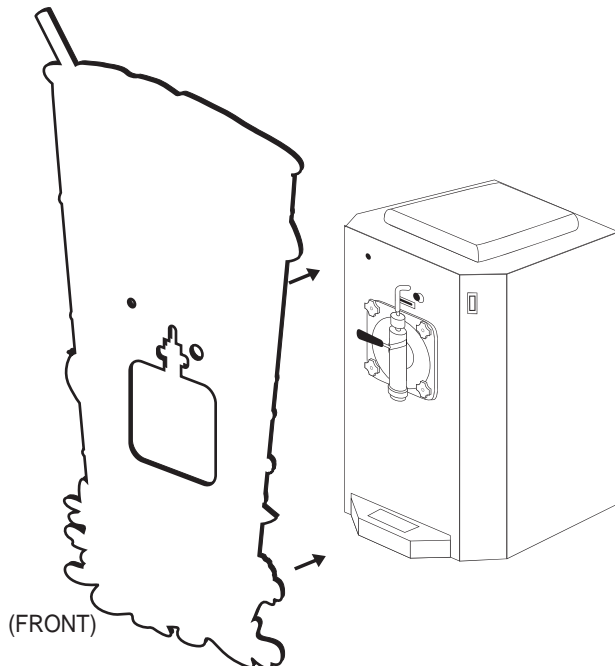

**NOTE: BE SURE
THE ENTIRE
SURFACE OF THE PANEL
FACE IS CLEAN BEFORE
INSTALLING THE PANEL.**

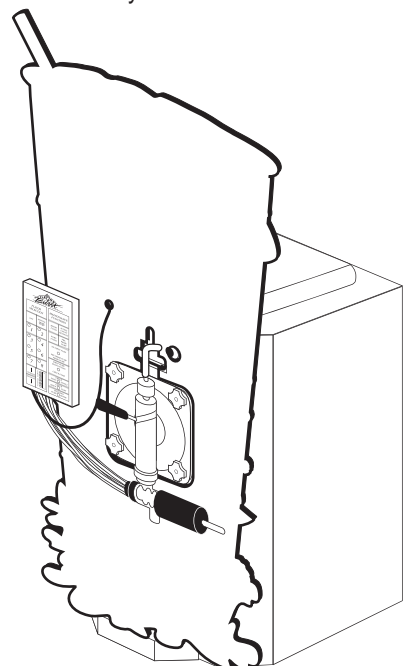

- 1 Remove the protective backing from each of the four hook-and-loop adhesive strips attached to the back of the panel.

- 2 With the Flavor Burst™ Blending System removed, place the presentation panel around the freezer door and onto the freezer. Press to secure.

- 3 Install the keypad, the 9-Tube Assembly, and the Blending Assembly in their appropriate positions to complete the assembly.

*For additional information refer to the current Operations Manual or contact your local Flavor Burst™ distributor.
