POP 8501D

Die Cut Guide for C300 Taylor Model Light Boxes

The POP 8501D duratrans is designed to accommodate the two styles of light boxes for the Taylor C300 freezer model. The curved light box requires a wider duratrans. The POP 8501D is sized to fit the curved light box without any modifications. The flat light box is smaller and the POP 8501D duratrans will need to be trimmed down to the size specified below.

Determine which freezer light box style you have and trim the duratrans to the "Die Cut" size given for that model. The image shown is a recommendation of what the duratrans should look like after it has been trimmed. The white dotted line shows the "Live Area"; everything inside the dotted line will be shown through the lightbox and the border outside the line will be hidden by the lightbox's frame. Ensure the logo fits within the Live Area, when measuring the duratrans to be cut. If you have any questions, please contact your local distributor.

C300 Curved Light Box
DIE CUT: 18.125" w x 10.5" h
LIVE AREA: 18.125" w x 10.5" h
(no trimming required)

C300 Flat Light Box
DIE CUT: 16.188" w x 10.5" h
LIVE AREA: 14.318" w x 8.63" h
